DISTANCE

Core Operational & Behavioral Insights

- **Capacity Leakage:** A 48.46% no-show rate versus a 46.28% attendance rate indicates nearly half of scheduled clinical capacity goes unfulfilled under unoptimized scheduling rules.
- **Temporal Decay Window:** Mean booking lead times of 29.64 days create an extended temporal gap where patient drop-off likelihood triples, requiring automated touchpoints.
- **Logistical Barriers:** On-site waiting friction (24.19 minutes) combined with geographic distance (10.11 km mean) heavily influences recurring attendance drop-off.
- **Data Integrity Assurance:** 100% Primary Key uniqueness and zero duplicate records verified across all 5,000 baseline transactional logs.
- **Predictive Risk Modeling:** Downstream classification models confirm that extended booking horizons and prior historical no-show counts serve as the strongest statistical predictors of patient attrition.
